As the central concept of Darwin's theory of evolution, natural selection implies that the fittest survive and spread their traits through a population. This concept is called the survival of the fittest. The fitness implied is reproductive fitness; that is, the ability to survive in the environment and

propagate the species.

Theory of Evolution - CliffsNotes Paleontology supports the theory of evolution because it shows a descent of modern organisms from common ancestors. Paleontology indicates that fewer kinds of organisms existed in past eras, and the organisms were probably less complex.

Evidence for Evolution - CliffsNotes Evolution, as understood by biologists, is the change through time that occurs in populations of organisms in response to changing environments. The changes, coded in the molecules of DNA, are transmitted from generation to generation and over the history of the Earth have resulted in progressively more complex life forms.
