Russian poet Marina Tsvetaeva's powerful poetic voice and her tragic life have often prompted literary commentators to treat her as either a martyr or a monster. Born in Russia in 1892, she emigrated to Europe in 1922, returned to the Soviet Union at the height of the Stalinist Terror, and committed suicide in 1941. Alyssa Dinega focuses on the poetry, rediscovering Tsvetaeva as a serious thinker with a coherent artistic and philosophical vision.

Essentials of Marketing Research: Putting Research into Practice, an exciting new practical guide by Kenneth E. Clow and Karen E. James offers a hands-on, applied approach to developing the fundamental data analysis skills necessary for making better management decisions using marketing research results. Each chapter opens by describing an actual research study related to the chapter content, with rich examples of contemporary research practices skillfully drawn from interviews with marketing research professionals and published practitioner studies. Clow and James explore the latest research techniques, including social media and other online methodologies, and they examine current statistical methods of analyzing data. With emphasis on how to interpret marketing research results and how to use those findings to make effective management decisions, the authors offer a unique learning-by-doing approach to understanding data analysis, interpreting data, and applying results to decision-making.

This classroom resource provides clear, concise scientific information in an understandable and enjoyable way about water and aquatic life. Spanning the hydrologic cycle from rain to watersheds, aquifers to springs, rivers to estuaries, ample illustrations promote understanding of important concepts and clarify major ideas. Aquatic science is covered comprehensively, with relevant principles of chemistry, physics, geology, geography, ecology, and biology included throughout the text. Emphasizing water sustainability and conservation, the book tells us what we can do personally to conserve for the future and presents job and volunteer opportunities in the hope that some students will pursue careers in aquatic science. Texas Aquatic Science, originally developed as part of a multi-faceted education project for middle and high school students, can also be used at the college level for non-science majors, in the home-school environment, and by anyone who educates kids about nature and water. The project's home on the web can be found at <http://texasaquaticscience.org>

The book presents most recent investigations into foreign language teaching and learning discussed by prominent scholars in the field. A wide variety of topics ranges from theoretical approaches to foreign language instruction to a discussion of findings of empirical research in language learning and pedagogy. The theoretical part of the volume tackles issues which constitute the backbone to the understanding of the processes involved in language development, learning and teaching and thus contribute to applied research. The empirical articles in Parts Two and Three of the volume report on studies focusing on such important issues as various dimensions of awareness (language, cross-cultural competence or affectivity) and specific methodologies implemented in different educational settings (such as, for instance, dyslexic learners) or in teacher training programmes.

Stephen Crane's immortal masterpiece about the nightmare of war was first published in 1895 and brought its young author immediate international fame. Set during the Civil War, it tells of the brutal disillusionment of a young recruit who had dreamed of the thrill and glory of war, only to find himself fleeing the horror of a battlefield. Shame over his cowardice drives him to seek to redeem himself by being wounded—earning what he calls the “red badge of courage.” Praised for its psychological insight and its intense and unprecedented realism in portraying the experience of men under fire, *The Red Badge of Courage* has been a beloved bestseller for more than a century.

Explains how animals are classified into different categories according to physical, behavioral, and biological characteristics, from the largest branch to the smallest.
