The first aircraft carriers made their appearance in the early years of World War I. These first flattops were improvised affairs built on hulls that had been laid down with other purposes in mind, and it was not until the 1920s that the first purpose-built carriers were launched, but no-one was as yet clear about the role of the carriers and they were largely unloved by the 'battleship admirals' who still believed that their great dreadnoughts were the ultimate capital ships. World War II changed all that, At Taranto, Pearl Harbour, and in the North Atlantic, the carrier, the ugly duckling of

the world's navies, proved itself to be the dreadnought nemesis. As the tide of war turned, the fast attack carriers of the U.S. Navy spearheaded the counter-attack in the Pacific while the makeshift escort carriers helped to seal the fate of the German U-boats in the Atlantic. The carrier, and naval aviation, thus emerged into the post-war world as the primary symbol and instrument of seapower; it would play a crucial role in the strategic encirclement of the Soviet Union and enabled western airpower to be rapidly and effectively deployed in areas of conflict as remote as Korea, Vietnam, the Falklands

and the Gulf. Kaplan describes the adventure of the young American, British, and Japanese naval aviators in the Second World War. It is an account of their experiences based on archives, diaries, published and unpublished memoirs, and personal interviews with veteran naval airmen of WWII, providing a vivid and often hair-raising picture of the dangers they encountered in combat and of everyday life aboard an aircraft carrier. It considers some of the key aspects of the WWII naval aviator's combat career, such as why it was that only a tiny minority of these pilots those in whom the desire for aerial combat

overrode everything accounted for such a large proportion of the victories. In the major carrier actions of that conflict, from the Royal Navy's attack on Taranto which crippled the Italian fleet in 1940, to the Japanese carrier-launched surprise attack on U.S. Navy battleships and facilities at Pearl Harbour in 1941, to the carrier battle of Midway in 1942, and the Great Marianas Turkey Shoot of 1944, through the Japanese Kamikaze campaign against the U.S. Carriers in the final stages of the Pacific war, this book takes the reader back to one of the most exciting and significant times in modern

history.

The Japanese attack on Pearl Harbor on 7 December 1941 sank or crippled almost all of the battleships belonging to the US Navy's Pacific Fleet, but the fleet's aircraft carriers survived to demonstrate that naval aviation was now the dominant factor in the struggle at sea, turning the tide of the Pacific War. That the US Navy had the necessary ships, aircraft and crews was the result of pioneering, far-sighted decisions made in the pre-war years. Before the First World War the navy had recognised the

potential of aircraft at sea, and it went on to develop the techniques and equipment that contributed so much to the defeat of the Japanese. This is the fascinating story Leo Marriott tells in this photographic history. In a selection of over 200 rare photographs he traces the growth of US naval aviation from the flimsy seaplanes of the first years of the twentieth century to the mighty armadas that challenged those of the Japanese and, after the carrier battles at Coral Sea and Midway, led the advance across the Pacific. Key aspects of the history are the navy's first aircraft carriers of the 1920s

and the tremendous progress made in the decades between the wars in tactics and strategy as well as in the design of ships and aircraft.

From critically acclaimed military historian Gerald Astor comes *Wings of Gold*, the first account of how the airplane transformed the U.S. Navy and paved the way to victory in the Pacific in World War II. Astor tracks that fateful journey from its humble beginnings in 1910 when Eugene Ely flew the very first

plane off the deck of a U.S. Navy ship to the unprecedented air combat missions that helped defeat the Japanese. Few naval aviators in World War II realized that when they earned their wings of gold they were about to become test pilots for a whole new kind of combat. In their own words, these courageous fliers describe the life-and-death air battles that defined the revolution in naval strategy that rose from the ashes of Pearl Harbor, when fighter pilots watched in horror as Japanese carrier-launched aircraft bombed their planes and airfields into smoking rubble. While following the pilots' firsthand reports of

air strikes and blazing dogfights across the islands and atolls of the Pacific, Astor explores the ways the U.S. Navy began its momentous transformation before the war. Later, the critical role of aircraft carriers in the stunning U.S. victory at Midway sounded the death knell for conventional naval warfare, yet the public, the press, the Army, and even the president's advisors refused to recognize the new reality. In fact, only a few in the Navy understood that a new era had begun that would change the face of war forever. The young Americans who fought the deadly duels against Imperial

Japanese forces high over the Pacific gave everything they had to the war effort, and many made the supreme sacrifice. Wings of Gold pays tribute to their courage, daring, and selfless dedication. Vividly told, thoroughly researched, and filled with stirring accounts of the Pacific War's greatest air battles, Wings of Gold is an important addition to the annals of World War II aerial combat.

All aspects of naval aviation in World War I are detailed in this superbly researched book.

century in the form of balloons and airships employed by the British Royal Navy for reconnaissance, and interest was stirring in naval circles in a greater aeronautical capacity for the service. Britain's tradition of projecting a global reach through her sea power would, in the view of many, be greatly enhanced by such a capability. Among the first advocates of military aircraft development was British naval minister, Winston Churchill. Over the course of the last century since this point of inception, huge leaps have been made in the design, development, and performance of naval

aircraft. This comprehensive account, brought to us by eminent aviation historian Philip Kaplan, details the journey from origin through early development into wartime deployment. This is carried forward through post-war innovations and into modern conflicts such as the Falklands campaign. Attention is paid to the key landmarks of aviation history, such as Taranto, Pearl Harbour, The Doolittle Raid, the Battle of Midway and the Korean campaign. Reference is also paid throughout to the flying aces; the high points in the combat careers of the greatest naval and marine aviators of the

past century. Kaplan weaves multiple threads in an effort to produce a comprehensive and detailed history. One of these is the part played by women in the history of flight, detailing a journey characterised by ever-closer involvement at the vanguard of aviation development, showing how societal changes have impacted upon this area in tune with others. Bringing the history up to date, there is a section dedicated to the Helicopter, its varying uses, current disposition and status of the various types in the U.S and British navies. inter-war period and the early years of the Second World War. This book is in two parts: naval aviation before the Second World War, and early war developments. It forms the backdrop for two further volumes which describe the naval aviation aspects of operations in the Atlantic, the Mediterranean and in the Far East. This volume shows how the evolution of the air weapon came to influence the general conduct of naval operations in the Second World War, and, in doing so, how far-reaching were the developments in our methods of waging naval air warfare. To explain such developments some reference will
