"This book analyzes how the governance of innovation can foster sustainability. The quest for innovation is consistently at the top of the agenda for policy makers around the globe, on the supra-national level, as well as for the nation states and all the way down to debates in local governance and policy boards. At the same time, sustainability is a core feature of this dialogue in creating, diffusing and using technologies and products so that human needs can be met, while unnecessary natural resources are not being used or destroyed. Based on these premises and given the complexity of sustainable innovation, there is an ever growing recognition among policy makers, industries and analysts that the development and diffusion of technological innovations need governing in order to contribute to societal goals such as climate change mitigation and resource efficiency. Such governance does not necessarily mean orchestration, imposing regulation or other policy measures in a top-down manner. Governance can be facilitated through a number of means and by various actors and different levels. This book presents a view

of governance that involves almost all types of actors related to any specific sector or field. "--

Everyone wants to go green these days, but for businesses that's easier said than done. How do you measure a company's carbon footprint? Are dryers or hand towels more eco-friendly? Recycled paper or FSC-certified? And what's the greenest company car? The Green Guide for Business answers all these questions and hundreds more, enabling businesses and organisations of all sizes to make eco-savvy decisions. Accessible but authoritative, the book also features scores of case studies to help readers learn from other people's successes and mistakes. From keeping ahead of environment legislation to green marketing, The Green Guide for Business is indispensable for every company with an environmental conscience.
