ASTRO Publishes Clinical Guidelines for Radiotherapy in Soft Tissue Sarcoma

A general MRI sequence was used to test the geometric accuracy of MRI scanners (n=8) and MR-linacs (n=2) at seven of eight Danish radiation therapy centers and one radiology department.

200 interactive genitourinary imaging cases deliver the best board review possible! Effective 2-page presentation for each case Cases organized and coded by difficulty level Eye-catching full-color design Part of the acclaimed McGraw-Hill's Radiology Case Review Series, this unique resource challenges you to look at a group of images, determine the diagnosis, answer related questions, and gauge your knowledge by reviewing the correct answer. It all adds up to the best review of genitourinary imaging available—one that's ideal for certification or recertification, or as an incomparable clinical refresher. Distinguished by an effective 2-page design and a full-color presentation, each book in this series is filled with cases, annotated images, questions and answers, pearls, and relevant literature references that will effectively prepare you for virtually any exam on the subject. This comprehensive coverage spans everything from basic principles through the latest diagnostic imaging techniques and equipment and technology. If your goal is to increase your knowledge of genitourinary imaging, you'll find this book to be an invaluable study partner.

GENITOURINARY TRACT IMAGING revisits the entire spectrum of genitourinary radiology through the presentation of radiographic cases. Cases selected will help physicians and other medical personnel learn the important areas in this field. This book is a companion to the GENITOURINARY TRCT IMAGING: The Requisites textbook. Together, they cover the field, providing excellent prep for board examinations and clinical review. Unknown

case presentation provides exceptional preparation for board exams Numerous cases with brief discussions allow readers to move from topic to topic swiftly Each case includes a brief discussion of disease as well as differential diagnosis to help readers prepare for board exams or re-certification Self-testing mimics official exam formats with challenging cases beyond exam levels to provide thorough preparation and build confidence Cases are randomly organised and divided into three overall categories to allow readers to test at differing degrees of difficulty Companion to the Zagoria/Tung: Genitourinary Radiology: The Requisites volume. Together they provide a great one, two combination punch to beat the exams Approximately 440 state-of-the-art images effectively complement the text and provide a clear picture of what exam takers can expect A wonderful preparation tool for residents, fellows, or practising radiologists preparing for re-certification exams

295 cases and more than 1700 illustrations teach you how to accurately interpret genitourinary tract images 4 STAR DOODY'S REVIEW! "The high-quality images and pithy discussions make this book very useful to radiologists, both in training and in practice....The book's best features are the excellent image quality, the inclusion of images of differential diagnostic considerations, and concise discussions of the cases. This is an excellent resource for radiologists in training and in practice. The case-based format is excellent for board preparation, and its concise prose provides all the necessary information while leaving out the excess."--Doody's Review Service Genitourinary Imaging Cases presents an efficient and systematic approach to examining images of the genitourinary system. You will find an unmatched collection of 295 cases ranging from normal anatomy to the full spectrum of disease — including renal cystic masses, renal infection, renal vascular disease, and female pelvic abnormalities. Included with these cases are 1700+ high-quality images that are representative of what you would see on various imaging modalities. The book's easy-to-navigate organization is specifically designed for use at the workstation. The concise text, numerous images, and helpful icons speed access to essential information and simplify the learning process. Features: Each case includes findings, differential diagnosis, comment/discussion, and clinical pearls Icons, a grading system depicting the full spectrum of diseases, common to rare, and imaging findings, typical to unusual, along with the consistent chapter organization make this perfect for rapid at-the-bench consultation Strong focus on pathology Special emphasis on the latest diagnostic modalities that include both CT and MR images

In 129 cases featuring over 600, high-quality images, Genitourinary Imaging Cases provides a succinct review of clinically relevant cases which cover both benign and malignant conditions of the genitourinary system. Cases are grouped into sections that are organized by body part including: Kidney, Retroperitoneum, Adrenal, Ureter, Bladder, Prostate, Urethra, Vagina, Penis, Testis, Epididymis, and Scrotum, Uterus and Fallopian Tube, and Ovary. Part of the Cases in Radiology series, this book follows the easy-to-use format of question and answer in which the patient history is provided on the first page of the case, and radiologic findings, differential diagnosis, teaching points, next steps in management, and suggestions for furthering reading are revealed on the following page. This casebook is an essential resource for Radiology Residents and practicing Radiologists alike.

Residents, fellows and practicing radiologists who are preparing for certification exams (the current ABR Part II oral, the future ABR Core and Certifying, CAQ and MOC) will find the new edition of this case-based review book an indispensable tool for success. Duke Radiology Case Review has long been considered one of the standards in board review, and is a well-known adjunct to the popular and well-attended board review course given by the prestigious Department of Radiology at Duke University. Close to 300 case presentations are structured to align with the way residents are taught to work through patient cases. Divided by body region and including chapters on interventional radiology and nuclear medicine, each case offers a clinical history, relevant images, and bulleted points describing the differential diagnosis. This is followed by the actual diagnosis and key clinical and radiologic facts about the diagnosis and suggested readings. This edition includes a new chapter on cardiac imaging.

Master the critical imaging content you need to know with this newly consolidated title in the popular Case Review series. Abdominal Imaging offers a highly illustrated, case-based preparation for board review to help residents and recertifying radiologists succeed on exams, demonstrate a clinical understanding of gastrointestinal and genitourinary imaging, and improve imaging accuracy and interpretation. Cases include both common and difficult-to-diagnose disorders including gallbladder diseases, pancreatitis and pancreatic masses, staging and identification of gynecologic malignancies, fluoroscopy findings in GI and GU diseases, and much more. Presents more than 160 high-yield case studies organized by level of difficulty, helping you build your knowledge and confidence in stages. Includes more than 650 multiple-choice questions, answers, and rationales that mimic the format of certification exams. Uses short, easily digestible chapters covering the full range of abdominal imaging for efficient, effective learning and exam preparation. Features 700+ high-quality, full-color images spanning the GI and GU systems and pertinent patient cases reflecting current abdominal radiology practice. Images include fluoroscopy and plain films, computed tomography, and magnetic resonance imaging, with coverage of key areas such as prostate MRI and rectal MRI, CT enterography, liver CT and MRI, and renal masses on CT and MRI. Consolidates topics covered in Gastrointestinal Imaging: Case Review and Genitourinary Imaging: Case Review into a single, convenient resource.

200 interactive brain imaging cases deliver the best board review possible! Effective 2-page presentation for each case Cases organized and coded by difficulty level Full-color design Part of the acclaimed McGraw-Hill's Radiology Case Review Series, this unique resource challenges readers to look at a group of images, determine the diagnosis, answer related questions, and gauge their knowledge by reviewing the correct answer. It all adds up to the best review of brain imaging available – one that's ideal for certification or recertification, or as an incomparable clinical refresher. Distinguished by an effective 2-page design and a full-color presentation, each book in this series is filled with cases, annotated images, questions and answers, pearls, and relevant literature references that will effectively prepare readers for virtually any exam on the subject. This comprehensive coverage spans everything from basic principles through the latest diagnostic imaging techniques and equipment and technology.

A book such as this, correlating radiologic findings with the associated gross and microscopic pathologic findings, has never been offered to the medical community. It contains radiologic images, in a variety of formats (ultrasound, CT scan, MRI scan) correlated with gross photos and photomicrographs of a wide spectrum of pathologic entities, including their variants, occurring in the following organs or anatomic sites. This book would be of particular interest to radiologists and radiologists-in-training, who naturally are very cognizant of radiologic abnormalities, but who rarely, if ever, encounter visual images of the pathologic lesions that they diagnose. It will also be of interest to pathologists and pathologists-in-training, urologists, GU radiation oncologists, and GU medical oncologists.
