Instructions for developing seventeen basic circus skills including unicycling, juggling, tightwire artistry, and clowning.

Local or autochthonous pig breeds represent a pool of genetic diversity of porcine species and a link with old-style traditional production systems and traditional pork products. These breeds were largely abandoned because they were not competitive in the concept of modern, industrial type of pig production. Despite an increased interest for local pig breeds in the past years, they remain largely untapped and the knowledge about their characteristics is limited, which was a challenge undertaken in the project TREASURE in the frame of multicriteria evaluation of local pig breeds. The book represents a valuable compendium of data on census, breeding organisations, production systems, and performances with ambition to present their contemporary (preserved) phenotype. There is no doubt that nowadays, biology benefits greatly from mathematics. In particular, cellular biology is, besides population dynamics, a field where techniques of mathematical modeling are widely used. This is reflected by the large number of journal articles and congress proceedings published every year on the dynamics of complex cellular processes. This applies, among others, to metabolic control analysis, where the number of articles on theoretical fundamentals and experimental applications has increased for about 15 years. Surprisingly, monographs and textbooks dealing with the modeling of metabolic systems are still exceptionally rare. We think that now time is ripe to fill this gap. This monograph covers various aspects of the mathematical description of enzymatic systems, such as stoichiometric analysis, enzyme kinetics, dynamical simulation, metabolic control analysis, and evolutionary optimization. We believe that, at present, these are the main approaches by which metabolic

systems can be analyzed in mathematical terms. Although stoichiometric analysis and enzyme kinetics are classical fields tracing back to the beginning of our century, there are intriguing recent developments such as detection of elementary biochemical synthesis routes and rate laws for the situation of metabolic channeling, which we have considered worth being included. Evolutionary optimization of metabolic systems is a rather new field with promising prospects. Its goal is to elucidate the structure and functions of these systems from an evolutionary viewpoint.

Love often comes when it's least expected. When you're Satra Sinclair, you run away from love as fast as you can. You find every excuse in the book for being choosy about who you date, or, in her case, don't date at all. Being a successful advertising executive working for a top advertising firm in New York, she had the world in the palm of her hand. She had the love of her close-knit family, great friends, but a non-existent love life. Since a recent heartbreak, Satra has carefully erected an iron clad wall around her heart, determined to never have it broken again. Fate and circumstance, however, had other ideas. Her boss' family emergency leaves her with the task of closing one of the

biggest deals her firm was trying to land with one of the most well-known businessmen on the east coast. Little did Satra know that she'd meet the love of her life that day. Shane Evans is a rich, successful businessman with a secret past that he'd like to forget. Besides work, Shane barely made time for anything else. Love and long term relationships were never a priority to him. After being cheated on by his former girlfriend, he became very jaded about love. Being constantly chased by gold diggers didn't help either. Becoming more successful and proving to his father that he could make it without the family money was his mission in life...until he met the beautiful Satra Sinclair. Besides being beautiful, she was smart, career-driven, and single, just like Shane. Forced to work closely together, their attraction to one another is instant. A friendship quickly blossoms, and their attraction grows stronger. Together they uncover a duplicitous plot that could hurt everyone they care about and each other. While trying to stop the evil forces determined to tear their lives apart, will these two lonely, hurt souls take a chance at love and finally choose one another?

The SMASH HIT SERIES now being developed at SYFY channel -- coming soon from NBC/Universal! Death Has a Brand New Appetite... When overweight treadmill salesman Reginald Baskin finally meets a co-

worker who doesn't make fun of him, it's his own bad luck that tech guy Maurice turns out to be a two-thousand-year-old vampire. And when Maurice turns Reginald to save his life, it's just Reginald's further bad luck that he wakes to discover he's become the slowest, weakest, most out-of-shape vampire ever created ... doomed to "heal" to his corpulent self for all of eternity. But as Reginald struggles with the downsides of being a fat vampire (too slow to catch people to feed on, mocked by those he tries to glamour, assaulted by his intended prey, and left for undead), he discovers rare powers in himself that few vampires have ... and just in time, because the Vampire Council wants him destroyed as an inferior representative of their race. Read the first book of Johnny B. Truant's blockbuster series, and you'll never look at vampires (or vampire stories) the same way again. ????? "Laugh out loud funny and the laughs just keep coming. I am in for the whole series because I need to know what happens next to Reginald, the Fat Vampire. It is absurd, and yet oddly comforting and believable that even the Vampire world has out of shape and awkward individuals." -- AJ ????? "I love a good vampire novel and Johnny B. Truant delivers on all levels. Humorous, suspense, action, gore, love story... it has all of these and excels at them. Twists and turns near the end of the story had me shouting out loud in my head towards certain characters and cheering Reginald, Maurice, and Nikki on! Looking for a new

vampire story to sink your fangs into... buy this book!" -- Christian Burch ????? "Truant has authored the most unique vampire novella I have ever read... I sincerely predict The Fat Vampire would become a most popular television series when producers learn of Truant's work." -- vinnieg ????? "Just when you think you'll never find a vampire novel again that doesn't involve bloodsuckers that look like they moonlight at American Apparel, here comes Reginald, 350-lb. office worker who, because he's in the wrong place at the wrong time, is turned into a vampire; now he's destined to be the out of shape, fat slob he's been all his life... forever. What, you thought he'd suddenly turn into Edward Cullen?" -- Phoenix59 ????? "Reginald is a very relatable character. He's been hammered down his whole life because of his weight, and he just doesn't see an end in sight. Even after being turned into a vampire things are looking down. But despite everything he perseveres. Having grown up over-weight myself I felt this character was a great role-model, despite a few instances where let his stomach make decisions for him." -- Michael Loring Perfect for fans of Rick Gualtieri's Tome of Bill series or Drew Hayes' Fred the Vampire Accountant series, Fat Vampire is the story of an unlikely hero who, after having an imperfect eternity shoved into his grease-stained hands, must learn to turn the afterlife's lemons into tasty lemon danishes. Click to start your new favorite series.
