Grey Sommers, Lord Wyndham, never met a predicament he couldn't charm his way out of. Then a tryst with a government official's wife during a bit of casual espionage in France condemns him to a decade in a dungeon, leaving him a shadow of his former self. Yet his greatest challenge may be the enigmatic spy sent to free his body--the only woman who might heal his soul. Cassie Fox lost everything in the chaos of revolution, leaving only a determination to help destroy Napoleon's empire through her perilous calling. Rescuing Grey is merely one more mission. She hadn't counted on a man with the stark beauty of a ravaged angel, whose desperate courage and vulnerability thaw her frozen heart. But a spy and a lord are divided by an impassable gulf even if they manage to survive one last, terrifying mission. . . . Praise for *Loving a Lost Lord* "Intoxicating and not-to-be missed." --*Romantic Times* (4 1/2 Stars, Top Pick) "Rich with historical detail and multifaceted characters." - *Publishers Weekly*, starred review "Exquisitely and sensitively written." --*Library Journal*, starred review "Romance at its best!" --*Julia Quinn*

objectives include: Establish national interagency wildland fire operations standards; Recognize that the decision to adopt standards is made independently by the NWCG members and communicated through their respective directives systems; Establish wildland fire position standards, qualifications requirements, and performance support capabilities (e.g. training courses, job aids) that enable implementation of NWCG standards; Support the National Cohesive Wildland Fire Management Strategy goals: to restore and maintain resilient landscapes; create fire adapted communities; and respond to wildfires safely and effectively; Establish information technology (IT) capability requirements for wildland fire; and Ensure that all NWCG activities contribute to safe, effective, and coordinated national interagency wildland fire operations. The "NWCG Standards for Interagency Incident Business Management" assists participating agencies of the NWCG to constructively work together to provide effective execution of each agency's incident business management program by establishing procedures for: - Uniform application of regulations on the use of human resources, including classification, payroll, commissary, injury compensation, and travel. - Acquisition of necessary equipment and supplies from appropriate sources in accordance with applicable procurement regulations. - Management and tracking of government property. - Financial coordination with the jurisdictional agency and maintenance of finance, property, procurement, and personnel records, and forms. - Use and coordination of incident business management functions as they relate to sharing of resources among federal, state, and local agencies, including the military. - Documentation and reporting of claims. - Documentation of costs and cost management practices. - Administrative processes for all-hazards incidents.

From the award-winning author of Ishmael's Oranges comes a searing novel with a profound moral conflict at its heart. When a heart attack kills his father, young architect Nick abandons his comfortable London life to volunteer abroad for a year – a last chance to prove himself, and atone for old sins. But in a remote village on the edge of the Sahara, dangerous currents soon engulf him: a simmering family conflict, hidden violence and dangerous fanaticism. An illicit attraction to his host's lonely wife soon threatens both of their worlds. But when a deadly drought descends it brings an irrevocable choice: should he take matters into his own hands? Or let fate run its course? His decision has life-changing consequences for them all.

Water Management Challenges in Global Change contains the proceedings of the 9th Computing and Control for the Water Industry (CCWI2007) and the Sustainable Urban Water Management (SUWM2007) conferences. The rationale behind these conferences is to improve the management of urban water systems through the development of computerbased methods. Issues such as economic globalisation, climate changes and water shortages call for a new approach to water systems management, which addresses the relevant technical, social and economic aspects. This collection represents the views of academic and industrial experts from a number of countries, who provide technical solutions to current water management problems and present a vision for addressing the global questions. The themes underlying many of the contributions include energy and material savings, water savings and the integration of different aspects of water management. The papers are grouped into three themes covering water distribution systems, sustainable urban water management and modelling of wastewater treatment plants. The water distribution topics cover asset and

information management, planning, monitoring and control, hydraulic modelling of steady state and transients, water quality and treatment, demand and leakage management, optimisation, design and decision support systems, as well as reliability and security of water distribution systems. The sustainable urban water management topics include urban drainage systems, water reuse, social aspects of water management and also selected facets of water resources and irrigation. Computer control of wastewater treatment plants has been seen as less advanced than that of clean water systems. To address this imbalance, this book presents a number of modelling techniques developed specifically for these plants. *Water Management Challenges in Global Change* will prove to be invaluable to water and environmental engineering researchers and academics; managers, engineers and planners; and postgraduate students.

Developing a system that can cope with variations of system or control parameters, measurement uncertainty, and complex, multi-objective optimization criteria is a frequent problem in engineering systems design. The need for a priori knowledge and the inability to learn from past experience make the design of robust, adaptive, and stable systems a difficult task. *Innovation in Power, Control, and Optimization: Emerging Energy Technologies* unites research on the development of techniques and methodologies to improve the performance of power systems, energy planning and environments, controllers and robotics, operation research, and modern artificial computational intelligent techniques. Containing research on power engineering, control systems, and methods of optimization, this book is written for professionals who want to improve their understanding of strategic developments in the area of power, control, and optimization.

automatic control systems. Microcontrollers are single-chip computers which can be used to control real-time systems. Low-cost, single chip and easy to program, they have traditionally been programmed using the assembly language of the target processor. Recent developments in this field mean that it is now possible to program these devices using high-level languages such as BASIC, PASCAL, or C. As a result, very complex control algorithms can be developed and implemented on the microcontrollers. Presenting a detailed treatment of how microcontrollers can be programmed and used in digital control applications, this book:

- * Introduces the basic principles of the theory of digital control systems.
- * Provides several working examples of real working mechanical, electrical and fluid systems.
- * Covers the implementation of control algorithms using microcontrollers.
- * Examines the advantages and disadvantages of various realization techniques.
- * Describes the use of MATLAB in the analysis and design of control systems.

* Explains the sampling process, z-transforms, and the time response of discrete-time systems in detail. Practising engineers in industry involved with the design and implementation of computer control systems will find Microcontroller Based Applied Digital Control an invaluable resource. In addition, researchers and students in control engineering and electrical engineering will find this book an excellent research tool.
