Decision making under Deep Uncertainty (DMDU) is applicable to climate adaptation. Planning for electric, natural gas and water supply when climate is changing rapidly and we can expect multiple Black Swans is one of the most serious practical problems we face (now).

Models Not Supermodels: Pandemic Decision-Making Under ...

The starting point of decision theory is the distinction among three different states of nature or decision environments: certainty, risk and uncertainty. The distinction is drawn on the basis of the degree of knowledge or information possessed by the decision-maker.

Managerial Decision-Making Under Risk and Uncertainty

A decision problem, where a decision-maker is aware of various possible states of nature but has insufficient information to assign any probabilities of occurrence to them, is termed as decision-making under uncertainty. A decision under uncertainty is when there are many unknowns and no possibility of knowing what could occur in the future to alter the outcome of a decision. We feel uncertainty about a situation when we can't predict with complete confidence what the outcomes of our actions ...

...

Decision theory is a calculus for decision-making under uncertainty. It's a little bit like the view we took of probability: it doesn't tell you what your basic preferences ought to be, but it does tell you what decisions to make in complex situations, based on your primitive preferences. 8 Lecture 19 • 8

Decision Making under Uncertainty - OpenCourseWare

Decision-making under Uncertainty: Most significant decisions made in today's complex environment are formulated under a state of uncertainty. Conditions of uncertainty exist when the future environment is unpredictable and everything is in a state of flux. The decision-maker is not aware of all available alternatives, the risks associated with each, and the consequences of each alternative or their probabilities.

Decision-Making under Certainty, Risk and Uncertainty

The orthodox normative decision theory, expected utility (EU) theory, essentially says that, in situations of uncertainty, one should prefer the option with greatest expected desirability or value. This simple maxim will be the focus of much of our discussion.
