An $n \times n$ matrix is called an elementary matrix if it can be obtained from the $n \times n$ identity matrix I_n by performing a single elementary row operation. Properties of Elementary Matrices: a. If the elementary matrix E results from

In linear algebra, two matrices are row equivalent if one can be changed to the other by a sequence of elementary row operations.

Alternatively, two $m \times n$ $m \times n$ matrices are row equivalent if and only if

– A^T is skew-symmetric.

(3) Let $A = B + C$ be a second such decomposition.

Subtraction gives $A - A^T = B - B^T + C - C^T$

$(A + A^T) - B = C - C^T$

$(A - A^T)$. The left matrix is symmetric while the right matrix is skew-symmetric.

Two matrices are row equivalent if one can be obtained from the other by a sequence of elementary row operations. The matrix in reduced row echelon form that is row equivalent to A is denoted by $\text{rref}(A)$. The rank of a matrix A is the number of rows in $\text{rref}(A)$.
