truss element, is particularly useful in the analysis of both two- and three-dimensional frame or truss structures. Formulation of the finite element characteristics of an elastic bar element is based on the following assumptions: 1.The bar is geometrically straight. 2.The material obeys Hooke's law. 3.Forces are applied only at the ends of the bar.

The main objective of finite element analysis is to predict the performance of physical products in real world applications. And the secondary objective is to reduce cost of post production like finishing, alterations and tolerances. Most of the things are checked before producing in real world simulation the product to avoid unnecessary costs. 1.
