## **Moon**

The Moon is a gravity rounded astronomical body of planetary-mass, rocky silicate composition and without significant atmosphere, hydrosphere or magnetic field. It is orbiting the planet Earth of the inner Solar System, as Earth's only natural satellite. Its surface gravity is about a sixth of Earth's with 0.1654 g. At an average orbital distance to Earth 384,402 km (238,856 mi), or 1.28 light ...

climate, and creating a tidal rhythm that has guided humans for thousands of years.

### **The Moon | NASA**

Moon, Earth's sole natural satellite and nearest large celestial body. Known since prehistoric times, it is the brightest object in the sky after the Sun. It is designated by the symbol ☾. Its name in English, like that of Earth, is of Germanic and Old English derivation.

### **Moon | Features, Phases, Surface, Exploration, & Facts ...**

Preparing to explore the surface of the Moon goes well beyond designing and building safe spacecraft and spacesuits. NASA also has to ensure the surface vehicles and suits have the mobility required to do science, and that astronauts have the tools they need to identify and scoop up rock and soil samples.

### **Full Moon Calendar 2020: When to See the Next Full Moon ...**

Directed by Duncan Jones. With Sam Rockwell, Kevin Spacey, Dominique McElligott, Rosie Shaw. Astronaut Sam Bell has a quintessentially personal encounter toward the end of his three-year stint on the Moon, where he, working alongside his computer, GERTY, sends back to Earth parcels of a resource that has helped diminish our planet's power problems.

### **Moon (2009) - IMDb**

The moon is the easiest celestial object to find in the night sky — when it's there. Earth's only natural satellite hovers above us bright and round until it seemingly disappears for a few nights.
