Definition and related concepts. Since the optical transfer function (OTF) is defined as the Fourier transform of the point-spread function (PSF), it is generally speaking a complex-valued function of spatial frequency. The

projection of a specific periodic pattern is represented by a complex number with absolute value and complex argument proportional to the relative contrast and translation ...

Optical transfer function - Wikipedia

The Git credential cache runs a daemon process which caches your credentials in memory and hands them out on demand. So killing your git-credential-cache--daemon process throws all these away and results in re-prompting you for your password if you continue to use this as the cache.helper option.
